

Food Science Hills Project

The formation of the Food Science Hills is an industrial development project in the central Shizuoka. The project is founded on the foodstuff, pharmaceutical, and chemical industries that are concentrated in the region.

The main objectives of the project are to raise the value-added business level of the existing industries and to create new health related industries.

To achieve these objectives, the excellent life science R&D capabilities of the academic and research communities are utilized in conjunction with the regional agricultural and fishery resources, abundant in the region.

Industrial-Academic-Governmental Technological Exchange and Cooperation
